

Lithostratigraphy of the Palaeozoic rocks and the Trias in the Carnic Alps (Italy-share)

Implementation:

Quaternary: Prof. Dr. Corrado Venturini (born 1955) – University Bologna)

Trias: Dr. Maria-Christina Perri (born 1949) und Prof. Dr. Corrado Venturini – University Bologna

Palaeozoic: Dr. Maria-Christina Perri, Dr. Monica Pondrelli (born 1967), Dr. Claudia Spalletta (born 1952), Prof. Dr. Corrado Venturini – University Bologna, University Pescara

Studies on these topics started in 1976, focusing from time to time on different parts of the Carnic Alps, basically throughout the whole Italian side of the Carnic Alps, including the Palaeozoic, the Triassic and the Quaternary successions. At the moment, the main topic is the study of lithostratigraphy of the Upper Devonian-Lower Carboniferous pelagic limestone, and of the Lower Carboniferous Hochwipfel and Dimon Formations to establish their formal definition. Moreover, the Quaternary sediments and morphologies are under study in order to reconstruct the evolution of the depositional environments and of the climatic controls.

“Gruppo Carnica”: Monica Pondrelli, Claudia Spalletta, Maria Christina Perri
